

MASHGIN

AI Self-Checkout

Scan to View Mashgin in AR

Data Sheet

Mashgin's Touchless Checkout System uses computer vision to recognize objects the same way your eyes do. It can instantly identify packaged goods, produce, and open plates from any angle. You don't need to scan barcodes: just place items down and Mashgin's AI rings up your cart in under a second.

Mashgin's proprietary computer vision algorithms make this possible, detecting and identifying objects with incredible accuracy. As a result, Mashgin's Touchless Checkout System can significantly speed up the checkout process, saving time and hassle for both customers and retailers.

4x

4x Faster Transaction Times

Mashgin increases throughput as much as 400% over cashiers at a traditional POS.

34%

34% More Revenue

Mashgin checkout is designed to eliminate lines, boosting revenues 20 to 400%.

400M+

Over 400 Million Transactions & 3,700 Locations

Mashgin is shortening lines in stadiums, cafes, and convenience stores across the globe.
